Trata-se dum sistema conservativo e, portanto, só pode ter pontos de sela ou centros. Assim: (-2,0) é ponto de sela (0,0) é um centro (2,0) é ponto de sela (e) Energia petencial nos pontos de equilibrio: $U(-2) = -(-2)^4 + 2(-2)^2 = -4 + 8 = 4$ U(0) = 0 $U(2) = -\frac{2^4}{4} + 2 \cdot 2^2 = 4$ por serem pontos de equilíbrio instavel. U é máximo local, em X=±2, E como X=0 é estável, U é mínimo 1 U jorbita heterodinica local nesse ponto: Sirbita heteraclinica Não existem Erbitas homoclinicas
